Heesen's 50m Galactica

Monday, 12 March 2007

On 9 January 2007, Heesen launched the [Galactica](#), the first of this year's series. This was a memorable event for Heesen Yachts. With her 50 metres, [Galactica](#) is one of the largest vessels ever built by Heesen Yachts.

Both the interior and exterior of [Galactica](#) are designed by the Heesen Design Team in cooperation with Omega Architects. The aluminium yacht will be powered by twin MTU 16V595 TE90 diesel engines which give her a maximum speed of 28 knots. [Galactica](#) will be classed by the American Bureau of Shipping and comply to the MCA code.

Sea trials of the [Galactica](#) will take place in March and delivery at the end of March. On her maiden voyage [Galactica](#) will sail to Barcelona.
